4. Base R- Data Frames

CT5102 - J. Duggan

Recap - R Data Types

	Homogenous	Heterogenous
1d 2d	Atomic Vector Matrix	List Data Frame/Tibble
nd	Array	

- The most common way of storing data in R
- Under the hood, a data frame is a list of equal-length vectors
- A two-dimensional structure, it shares properties of both a list and a matrix

Creating a data frame

```
d \leftarrow data.frame(x=1:3, y = LETTERS[1:3], z = letters[1:3])
d
## x y z
## 1 1 A a
## 2 2 B b
## 3 3 C c
d$x
## [1] 1 2 3
d$y
## [1] A B C
## Levels: A B C
d$z
```

summary function with data frames

```
d \leftarrow data.frame(x=1:3, y = LETTERS[1:3],
              z = letters[1:3])
d
## x y z
## 1 1 A a
## 2 2 B b
## 3 3 C c
summary(d)
##
   X
  Min. :1.0 A:1 a:1
##
## 1st Qu.:1.5 B:1 b:1
## Median:2.0 C:1 c:1
  Mean :2.0
##
##
  3rd Qu.:2.5
```

mtcars data frame

A data frame with 32 observations on 11 variables.

- mpg Miles/(US) gallon
- **cyl** Number of cylinders
- **disp** Displacement (cu.in.)
- hp Gross horsepower
- drat Rear axle ratio
- wt Weight (1000 lbs)
- qsec 1/4 mile time
- vs V/S
- am Transmission (0 = automatic, 1 = manual)
- gear Number of forward gears
- carb Number of carburetors

mtcars sample data

knitr::kable(mtcars[1:10,1:6])

	mpg	cyl	disp	hp	drat	wt
Mazda RX4	21.0	6	160.0	110	3.90	2.620
Mazda RX4 Wag	21.0	6	160.0	110	3.90	2.875
Datsun 710	22.8	4	108.0	93	3.85	2.320
Hornet 4 Drive	21.4	6	258.0	110	3.08	3.215
Hornet Sportabout	18.7	8	360.0	175	3.15	3.440
Valiant	18.1	6	225.0	105	2.76	3.460
Duster 360	14.3	8	360.0	245	3.21	3.570
Merc 240D	24.4	4	146.7	62	3.69	3.190
Merc 230	22.8	4	140.8	95	3.92	3.150
Merc 280	19.2	6	167.6	123	3.92	3.440

mtcars using str()

```
str(mtcars)
   'data.frame': 32 obs. of 11 variables:
##
   $ mpg : num 21 21 22.8 21.4 18.7 18.1 14.3 24.4 22.8 19.2
                6 6 4 6 8 6 8 4 4 6 ...
##
   $ cyl : num
   $ disp: num 160 160 108 258 360 ...
##
##
   $ hp : num
                110 110 93 110 175 105 245 62 95 123 ...
                3.9 3.9 3.85 3.08 3.15 2.76 3.21 3.69 3.92 3

                4 4 4 3 3 3 3 4 4 4 ...
##
   $ carb: num 4 4 1 1 2 1 4 2 2 4 ...
```

head() and tail() functions

```
head(mtcars[,1:6])
```

```
##
                    mpg cyl disp hp drat wt
## Mazda RX4
                   21.0
                            160 110 3.90 2.620
  Mazda RX4 Wag 21.0
                         6 160 110 3.90 2.875
  Datsun 710
                22.8
                         4 108 93 3.85 2.320
## Hornet 4 Drive 21.4
                         6 258 110 3.08 3.215
## Hornet Sportabout 18.7
                         8 360 175 3.15 3.440
## Valiant
                   18.1
                            225 105 2.76 3.460
```

```
tail(mtcars[,1:6])
```

```
## Porsche 914-2 26.0 4 120.3 91 4.43 2.140 ## Lotus Europa 30.4 4 95.1 113 3.77 1.513 ## Ford Pantera L 15.8 8 351.0 264 4.22 3.170 ## Ferrari Dino 19.7 6 145.0 175 3.62 2.770
```

Subsetting rows

```
## mpg cyl disp hp drat wt qsec vs am ged
## Porsche 914-2 26.0 4 120.3 91 4.43 2.140 16.7 0 1
## Lotus Europa 30.4 4 95.1 113 3.77 1.513 16.9 1 1
## Ford Pantera L 15.8 8 351.0 264 4.22 3.170 14.5 0 1
## Ferrari Dino 19.7 6 145.0 175 3.62 2.770 15.5 0 1
## Maserati Bora 15.0 8 301.0 335 3.54 3.570 14.6 0 1
```

Accessing rows/columns

```
mtcars[1:10,1:6]

## mpg cyl disp hp drat wt
```

```
## Mazda RX4
                 21.0
                         6 160.0 110 3.90 2.620
## Mazda RX4 Wag 21.0 6 160.0 110 3.90 2.875
                         4 108.0 93 3.85 2.320
## Datsun 710
               22.8
## Hornet 4 Drive 21.4
                         6 258.0 110 3.08 3.215
## Hornet Sportabout 18.7
                         8 360.0 175 3.15 3.440
                   18.1
## Valiant
                         6 225.0 105 2.76 3.460
## Duster 360
                 14.3
                         8 360.0 245 3.21 3.570
## Merc 240D
                 24.4
                         4 146.7 62 3.69 3.190
                         4 140.8 95 3.92 3.150
## Merc 230
                 22.8
## Merc 280
                         6 167.6 123 3.92 3.440
                 19.2
```

Filtering rows and columns

6

Ferrari Dino 19.7

Challenge 4.1

- List all the cars that have an mpg greater than the average
- List the car(s) with the greatest displacement (**disp**)

subset()

- The subset() function can also be used to select variables and observations.
- Takes the data frame, the conditions, and the columns to return

```
subset(mtcars,cyl==6,select=c("mpg","cyl"))
```

```
##
                mpg cyl
## Mazda RX4 21.0 6
## Mazda RX4 Wag 21.0
                     6
## Hornet 4 Drive 21.4
                     6
## Valiant
         18.1
                     6
## Merc 280 19.2
                     6
## Merc 280C 17.8
                     6
## Ferrari Dino 19.7
                     6
```

Processing a data frame with functions - sapply()

- As a data frame is also a list, the apply family of functions can be used to process the list
- sapply and lapply process a data frame on a column by column basis

```
sapply(subset(mtcars,cyl==6,select=c("mpg","cyl")),
    function(col){min(col)})
```

```
## mpg cyl
## 17.8 6.0
```

Processing a data frame with functions - apply()

 The apply function can be used to process the data frame by row or by column

```
apply(subset(mtcars,cyl==6,select=c("mpg","cyl")),2,
       function(col){min(col)})
##
   mpg
        cyl
## 17.8 6.0
apply(subset(mtcars,cyl==6,select=c("mpg","cyl")),1,
       function(row){max(row)})
```

```
Mazda RX4
                    Mazda RX4 Wag Hornet 4 Drive
                                                          Valiant
##
                                             21.4
##
             21.0
                             21.0
##
        Merc 280C Ferrari Dino
             17.8
##
                             19.7
```

18.

Adding new columns to a data frame

- Often the initial data set may not contain sufficient information for analysis
- Adding new variables (columns) is an important feature to have
- Data frames support this: columns can be combined or new information used

```
mtcars$name <- rownames(mtcars)
mtcars[1:5,-(1:8)]</pre>
```

##	am	gear	carb	name
## Mazda RX4	1	4	4	Mazda RX4
## Mazda RX4 Wag	1	4	4	Mazda RX4 Wag
## Datsun 710	1	4	1	Datsun 710
## Hornet 4 Drive	0	3	1	Hornet 4 Drive
## Hornet Sportabout	0	3	2	Hornet Sportabout

Deleting a column

To delete a column, set it to NULL

```
mytest <- mtcars
mytest[1,1:3]

## mpg cyl disp
## Mazda RX4 21 6 160

mytest$mpg <- NULL
mytest[1,1:3]

## cyl disp hp</pre>
```

Mazda RX4 6 160 110

Challenge 4.2

Create a new column on mtcars that contains kilometers per gallon.

Missing data - complete.cases()

```
d \leftarrow data.frame(x=1:3, y = LETTERS[1:3],
                z = letters[1:3])
d[2,3] <- NA
d
## x y z
## 1 1 A a
## 2 2 B <NA>
## 3 3 C c
complete.cases(d)
## [1] TRUE FALSE TRUE
d[complete.cases(d),]
```

CT5102 - J. Duggan

xyz ##11Aa

Exploring complete.cases()

Hornet 4 Drive 21.4 6

```
mtcars1 <- subset(mtcars, select = mpg:disp)</pre>
sum(complete.cases(mtcars1))
## [1] 32
mtcars1[4,3] <- NA
mtcars1[4,]
##
                   mpg cyl disp
## Hornet 4 Drive 21.4 6 NA
mtcars1[!complete.cases(mtcars1),]
##
```

NΑ

mpg cyl disp

Challenge 4.3

- Explore the data set nycflights13::flights
- Find the total number of incomplete cases
- Use sapply() to find the number of missing values for each column.

The tibble

- Tibbles are data frames, but they tweak some older behaviours to make life a little easier
- One of the unifying features of the tidyverse
- To coerce a data frame to a tibble, use as_tibble()
- A tibble can be created from individual vectors using tibble()

```
t <- tibble(x=1:3, y = LETTERS[1:3], z = letters[1:3])
t
## # A tibble: 3 x 3</pre>
```

Tibble abbreviations

t

Data Type

categorical
dates

Summary - Data Frames

- Data frames/tibbles are the most common way of storing heterogeneous data in R
- Under the hood, a data frame is a list of equal-length vectors, and shares properties of both a list and a matrix
- Key for processing rectangular data, ideally in "tidy" format (every row is an observation, every column a variable)

Summary - Base R

	Homogenous	Heterogenous
2d	Atomic Vector Matrix Array	List Data Frame/Tibble
